

60 cones a day I chose 60 because it's a multiple of 15 my frozen yogurt will be 2.00 \$ for scoops a day (4 cartons times five dollars a day)

We need sixty cones a day each box of 30 cones is 2.25 \$ so I do 2.25 \$ times three
 $2.25 \$ \times 3 = 6.75 \$$

the total money for scoops the week will be

the total cost a week for cones would be

total cost for everything a week 140.50 \$

100 \$

be

40.50 \$

6.75 \$ x 5

48

306.75

x 6

4050

in one week I will sell 300 cones I will make 600 dollars. I will have 560.50 \$ to go to the food bank

15

I used multiples of 15

my answer is reasonable because I did it thoroughly and checked it with teachers.
